

PAYPAL INSTANT REFUNDS

By Tigeh

Method (v1 - best):

PayPal account in good standing (make sure you have some genuine purchases on it)
VPN account (Personally I use nord, you can find plenty of accounts in VPN section)
CCleaner (use a free trial, or just download a cracked version from nulled)
User Agent Switcher (I use this one for Chrome, you can find a version for your browser by googling "user agent switcher yourbrowsername")
Now for the process itself:

Head over to your paypal account and disable 2FA from it and wait a few days. If you already don't have a 2FA then skip this step.
Install User Agent Switcher on your browser.
Use CCleaner and clear all of the cookies/data/residual files from your browser.
Open Agent Switcher and change it so it looks like one of the devices you don't usually use. (e.g. If you are a windows user, change it to mac, and vice versa)
Now open your VPN and connect to any server close to your country. You can even use the one located in your country. And here comes the tricky part as G2A blocks most of the VPN connections. The reason why I say most is that they don't block every single one of the servers, so the chances of finding one while slim are still possible.
Connect to a vpn, visit g2a and check if they will allow you to make a purchase.
If you get a server error and a message to contact their support, close your browser, run ccleaner, and change your VPN server. Do this until you are able to make a purchase
Once you successfully found the server, note it down. Run step 7 again, but this time without disconnecting from a vpn.
Open g2a a quickly select either the game you want, or a giftcard of high value. (Why quickly? Because you are pretending to be someone who is using someone else's stolen credentials in order to make a purchase)
Checkout with paypal. DO NOT USE YOUR PAYPAL EMAIL IN THE "GOODS DELIVERY BOX"
Receive the code, redeem it.
And now the fun part starts:

Disconnect from a vpn, run ccleaner again, disable your Agent Switcher
Go to your paypal account
Locate payment to g2a in recent transactions
Click on it and report unauthorized transaction
In the message box put something like: "Hey i just saw a payment go through from my phone but i wasn't the one doing it please help me resolve this blah blah blah, use your SE skills"
Expect a prompt response from PayPal. And boom you have your money back.
NOTE: The fastest it took for paypal to return me my money was 15 minutes and the longest was < 24 hours.

FAQ:

What to do if this fails? If you followed all of the steps it won't. But on the small chances it does, simply contact your bank, claim paypal won't return you the money even though the purchase wasn't made by you. Bank always sides with customers in these types of situations.

Why do I have to disable 2fa on my PayPal? Because it drastically increases your chances of winning an unauthorized claim. If you don't want to do it you are free to try the process without it but I cannot guarantee it will work.

Mail template:

Since I couldn't contact customer service, I was only able to create the case from the automated machine. Regarding the unauthorized transaction, a scammer (posed as IT support) had remote access to my laptop to remove viruses. I left my laptop on at night and didn't check till the morning and I realized through facebook-paypal notification that someone had sent \$200.

I couldn't contact the guy anymore and I really need the money back as soon as possible. I live in New York where my family and I are out of work because of the quarantine and we are struggling to pay for rent and we are almost out of food. In addition, my father is sick and I do not have enough money to pay for his medicine. I kept calling the paypal hotline but it appears to be closed. Please get back to me quickly as I need the money urgently, and thank you for understanding this dire situation.

Method (v2):

- remove 2fa and all other verifications until ordering (wait 12 hours after you do this)

- 1) Connect to VPN (same country as PayPal account)
- 2) Use a device you never used that PayPal account before
- 3) Use a browser never used before
- 4) Connect with all of this to the PayPal account
- 5) Go ahead to the website you looking to order from
- 6) Create a gmail (brand new), something like your PayPal name (if the name is "Amyax Noyrc" create an account like: "amyaxnoyrc123@gmail.com")
- 7) Create an account
- 8) Go ahead and create a cart (what you looking to purchase)
- 9) Fill out an address that is close by to you, the name same as PayPal's account and go ahead and submit it
- 10) Pay with PayPal
- 11) After you paid, stop using your PayPal account until they deliver.
- 12) After they deliver, go on your usual device that you use PayPal, same IP, same browser (everything the same)
- 13) Connect to any spoofer (FireRTC recommended)
- 14) Add phone number linked to the PayPal account (you get it from the settings or form)
- 15) Spoof the number and call customer support
- 16) Tell them you noticed an unauthorized transaction on your account some that happened some days ago.
- 17) Don't forget to tell them that you were on vacation during that time and you didn't checked the account so you don't know anything about it.
- 18) Important thing is to say that you noticed exactly when you called
- 19) They will issue instant refund if the phone number is linked the PayPal account

- opening a dispute won't get instant refund, it will get refund in some hours, so spoofing the call is more effective and 100% success

Method (v2.1):

- remove 2fa and all other verifications until ordering (wait 12 hours after you do this)

- 1) Connect to VPN (same country as PayPal account)
- 2) Use a dispositive you never used that PayPal account before
- 3) Use a browser never used before
- 4) Connect with all of this to the PayPal account
- 5) Go ahead to the website you looking to order from
- 6) Create a gmail (brand new), something like your PayPal name (if the name is "Amyax Noyrc" create an account like: "amyaxnoyrc123@gmail.com")
- 7) Create an account
- 8) Go ahead and create a cart (what you looking to purchase)
- 9) Fill out an address that is close by to you, the name same as PayPal's account and go ahead and submit it
- 10) Pay with PayPal
- 11) After you paid, stop using your PayPal account until they deliver.
- 12) After they deliver, go on your usual device that you use PayPal, same IP, same browser (everything the same)
- 13) Go to the transaction, file an item not described/recieved case.
- 14) Open up PayPal on the browser you usually use with your usual IP, then tell PayPal that you would like to report and unauthorised charge, normally they would follow through.
- 15) Click on the link, copy the link and paste it to the live chat support.
- 16) They will start investigating and asking you questions. One of the question will be when you noticed the action, always say that you noticed in the day that you are contacting them, not in any other day.
- 17) A password reset will be issued.
- 18) After some minutes a refund will be issued directly to your balance or directly to your card/bank depending what payment method you used for the transaction.
- 19) Success

Method (v3 safe):

- 1) Purchase normally with PayPal
- 2) Wait for delivery
- 3) Check website's terms of service (if they are responsible for lost packages or not)
- 4) Open a claim saying you want to return the product
- 5) After you started the claim, please tell them you already tried to contact the company but everyone is ignoring you
- 6) Escalate the claim directly to PayPal
- 7) They will offer labels to ship the items back to them
- 8) Go ahead and edit the labels to FTID. If they are not responsible for lost packages go ahead and use FTID v4 or v5, if they are, go ahead and use FTID v6 (Lost In Transit - LIT)
- 9) After you FTID them, wait for FTIDs to be delivered. After 2-3 days, contact PayPal regarding the shipments that arrived to their warehouse.
- 10) They will issue refund instantly when they see the message
- 11) Success

Info regarding FTIDs:

FTID version 4: This is where you use single side print flyers with an advertisement on it and place the label(ftid3 label) on the other side (without ad)

- typically you would only use this for international orders so it gets through customs quicker or if you needed faster shipping with say budget shipping labels
- often referred to as 'advanced' FTID3, but its not really I only use this for international orders

FTID version 5: There's like 10 different versions of FTID5 but here is the barcode method:

- Use a barcode generator and add your tracking number to it then replace on label
- create a QR code holding a similar or unreadable tracking number
- it's completely unnecessary to use this method unless you are doing a fake return

FTID version 6.1 (Lost In Transit): Get your label.

Attach to parcel.

Proceed to beat the living fucking shit out of the Parcel.

Send beaten up empty parcel.

Courier will notice the parcel looks like shit and will investigate it further to find out its empty.

Box will be thrown away.

FTID version 6.2 (Lost In Transit): Use a little bit of glue on the label. Roll up the corners or edges and then hope it gets lost in transit

Or use double sided tape and hope it gets caught on another surface after it gets scanned.

Box will be thrown away.

This is how FTID version 3 looks if you don't know how it looks and how to edit FTID version 3:
